

## SPECIFICATIONS

### Mechanical

- IP55 waterproof box, with a door, wall mounted.
- Connection via screw terminal after passing through the stuffing box.

### Electrical

- Power supply: 230 V + / - 10%, 50 or 60 Hz. The standard devices do not include circuit breaker or switch, on the mains (principle continuous operation). You must provide them on your supply line.
- Output signal: pulse type, protected against overloads and short circuits.
- Remote control by contact allowing to stop the output pulse by closing the contact.
- Indicators: LED indicator for power on, output pulse and output relay.

## MECHANISM

After the installation of the barrier, you must simply connect it to the generator unit with the correct polarity (anode and cathode).

If the mains is present, the green LED "sector" is on. The output turns on as soon as the remote control switch is opened causing the lighting of the red LED "exit" and the sticking of the relay operation indicator.
